

I claim:

1. A syringe comprising:
 - a) a hollow syringe barrel;
 - b) a plunger member;
 - c) said plunger member comprising a plunger shaft and piston; and
 - d) a corrugated sheath enclosing and encircling a portion of said plunger shaft.
2. A syringe comprising:
 - a) a hollow syringe barrel comprising a straight segment and a corrugated segment;
 - b) a plunger member; and
 - c) said plunger member comprising a plunger shaft and piston.
3. A syringe comprising:
 - a) at least one hollow syringe barrel;
 - b) a plunger member comprising a base and walls, said walls extending from said base;
 - c) said plunger member comprising a plunger shaft extending from said base; and
 - d) said plunger shaft comprising a piston.

20250629.012402

4. The syringe of claim 1, wherein said plunger member comprises a plunger handle member.
5. The syringe of claim 2, wherein said plunger member comprises a plunger handle member.
6. The syringe of claim 3, wherein said at least one syringe barrel comprises a handle member
7. The syringe of claim 4, wherein said plunger handle member is molded to a rear terminus of said plunger shaft.
8. The syringe of claim 1, wherein a rear terminus of said corrugated sheath is molded to a plunger handle member.
9. The syringe of claim 2, wherein, said corrugated segment is molded to a plunger handle member.
10. The syringe of claim 5, wherein said plunger handle member is molded to a rear terminus of said plunger shaft.
11. The syringe of claim 3, wherein said walls extending from said base concentrically surround said plunger shaft.

12. The syringe of claim 3, wherein said at least one hollow syringe barrel comprises a glide space.
13. The syringe of claim 1, wherein said corrugated sheath is expandable and collapsible along the longitudinal axis of said hollow syringe barrel.
14. The syringe of claim 2, wherein said corrugated segment is expandable and collapsible along the longitudinal axis of said hollow syringe barrel.
15. The syringe of claim 1, wherein said hollow syringe barrel comprises a syringe barrel handle member.
16. The syringe of claim 15, wherein said syringe barrel handle member is molded or formed on the rearward end terminus of the syringe barrel.
17. The syringe of claim 15, wherein a forward end terminus of said corrugated sheath is attached to a rearward end face surface of said syringe barrel handle member.
18. The syringe of claim 3, wherein said at least one syringe barrel comprises sealing rings.

19. The syringe of claim 3, wherein said plunger member comprises sealing rings.
20. A syringe comprising:
 - a) a hollow syringe barrel;
 - b) a plunger member;
 - c) said plunger member comprising a plunger shaft and piston; and
 - d) a contaminant shield.
